### Course Description

This comprehensive 5-day course focuses on optimizing oil and gas facilities design and operations. Participants will gain in-depth knowledge of infrastructure planning, equipment selection, process optimization, and economic evaluation techniques. The course covers both upstream and downstream operations, emphasizing practical applications and industry best practices.

### Learning Objectives

- Develop strategies for optimizing oil and gas facility design and operations
- Understand key components of oil and gas infrastructure and their interrelationships
- Master techniques for equipment selection and process optimization
- Learn economic evaluation methods for facility design and operational decisions
- Gain insights into emerging technologies and industry trends

### Course Modules

#### Day 1: Oil & Gas Infrastructure Overview

- Field processing facilities
- Water injection systems
- Power generation and distribution
- Refining facilities
- Lifecycle cost analysis

#### Day 2: Equipment and Processes

- Flowlines and pipeline systems
- Crude separation and treatment
- Gas handling and compression
- Oil pumping and transportation

#### Day 3: Water Management

- Seawater treatment and injection
- Produced water handling and reinjection
- Pump selection and optimization
- Water quality control

## Day 4: Midstream Operations

- Transportation infrastructure
- Pump and compressor stations
- Storage facilities
- Monitoring and control systems

## Day 5: Gas Operations and Economic Evaluation

- Gas processing and treatment
- LNG facilities
- Economic analysis of facility designs
- Optimization strategies and case studies

## Practical Wins for Participants

- Ability to identify and implement cost-effective facility design improvements
- Enhanced skills in optimizing operational efficiency and production output
- Improved decision-making capabilities for facility investments and upgrades
- Network with industry professionals and gain insights into best practices
