Comprehensive Machine Learning: From Fundamentals to AI

Ref: 321786_146760 **Date:** 01 - 05 Jun 2026 **Location:** Prague (Czech) **Fees:** 4400 **Euro**

Course Description

This intensive 5-day course provides a comprehensive introduction to machine learning, covering fundamental concepts, popular algorithms, and practical applications. Participants will gain hands-on experience with Python-based tools and frameworks, learning to build, evaluate, and deploy machine learning models for real-world problems.

Learning Objectives

- Understand core machine learning concepts and algorithms
- Gain proficiency in using Python for data analysis and model development
- Learn to build and evaluate supervised and unsupervised learning models
- Explore neural networks and deep learning techniques
- Develop skills to implement end-to-end machine learning projects

Course Modules

Day 1: Introduction to Machine Learning and Python

- Overview of machine learning and its applications
- Python fundamentals for data science
- Data preprocessing and exploratory data analysis
- Introduction to scikit-learn library

Day 2: Supervised Learning - Classification and Regression

- Linear and logistic regression
- Decision trees and random forests
- Support Vector Machines SVM
- Model evaluation and validation techniques

Day 3: Unsupervised Learning and Dimensionality Reduction

- Clustering algorithms K-means, hierarchical clustering
- Principal Component Analysis PCA
- Feature selection and engineering
- Anomaly detection techniques

Day 4: Neural Networks and Deep Learning

A graphic of a chessboard with several chess pieces (king, queen, rook, knight, and pawns) in gold and silver. The text 'UK Training PARTNER' is overlaid on the board.

UK Training
PARTNER

- Artificial Neural Networks ANN fundamentals
- Deep learning architectures
- Convolutional Neural Networks CNN for image processing
- Recurrent Neural Networks RNN for sequence data

Day 5: Advanced Topics and Project Implementation

- Ensemble methods and boosting algorithms
- Natural Language Processing NLP basics
- Introduction to reinforcement learning
- End-to-end machine learning project implementation

Practical Wins for Participants

- Build a predictive model for customer churn analysis
- Develop an image classification system using deep learning
- Create a recommendation engine using collaborative filtering
- Implement a sentiment analysis tool for social media data

A graphic of a chessboard with several chess pieces. A large gold king piece is in the foreground, with a silver pawn and a silver knight behind it. In the background, there are concentric white circles on a dark background.
