#### Introduction

Machine Learning is a subset of artificial intelligence AI that focuses on developing algorithms and statistical models that enable computers to learn and improve their performance on a specific task without being explicitly programmed for that task. The core idea behind Machine Learning is to allow computers to learn from data and experiences, adapt to new input, and make decisions or predictions based on that learning.

#### **Course Objectives**

Understand the basic concepts of Machine Learning, including supervised, unsupervised, and reinforcement learning paradigms.

Learn how to preprocess and explore data to make it suitable for Machine Learning models. Gain familiarity with popular Machine Learning algorithms and their application in different scenarios

Develop the ability to evaluate and fine-tune Machine Learning models to achieve optimal performance.

Apply Machine Learning techniques to real-world projects and solve complex problems.
