Intro to Monetary & Financial Statistics Compilation

Ref: 321664_167132 **Date:** 19 – 30 July 2027 **Location:** Bordeaux (France) **Fees:** 9400 GBP

Why This Course

Accurate monetary and financial statistics are critical for effective economic policy, financial stability, and informed decision-making. Central banks, regulatory bodies, and financial institutions rely on standardized data to monitor financial developments, assess risks, and guide policy actions.

This intensive 2-week program equips participants with practical skills to compile, analyze, and report monetary and financial statistics according to international standards. By combining theory with hands-on exercises, the course ensures participants can produce high-quality analytical accounts that support policy formulation and macroeconomic analysis.

What You'll Learn and Practice

By attending this program, you will be able to:

- Understand the international frameworks and methodologies for monetary and financial statistics.
- Apply residency, sectorization, and valuation principles in financial data compilation.
- Compile and analyze sectoral balance sheets and surveys for central banks and other financial institutions.
- Derive monetary and credit aggregates for policy and economic analysis.
- Use standardized report forms to ensure accurate and consistent data reporting.
- Link monetary statistics with broader macroeconomic accounts, including national accounts and balance of payments.
