Amsterdam (Netherlands)

Smart Archiving and Electronic Information Organization

Ref: 321790_171098 **Date:** 20 – 24 September 2027 **Location:** Amsterdam (Netherlands) **Fees:** 5900 GBP

Why This Course

In today's digital workplace, organizations generate vast amounts of information that must be stored, organized, and retrieved efficiently. Poor information management can lead to compliance risks, operational inefficiencies, and lost knowledge. This intensive 1-week program equips participants with advanced skills in smart archiving and electronic information organization, enabling them to implement robust document management systems, optimize digital workflows, and ensure long-term data preservation.

What You'll Learn and Practice

By participating in this course, you will:

- Master core principles of smart archiving and electronic document management.
- Develop strategies for efficient digital information organization and retrieval.
- Learn best practices for long-term digital preservation and data security.
- Implement and optimize electronic archiving systems for workplace efficiency.
- Apply metadata management and taxonomy development to enhance searchability and access.

Program Flow

Day 1: Foundations of Smart Archiving

- Introduction to smart archiving concepts and benefits
- Digital document lifecycle management
- Overview of electronic archiving systems
- Legal and compliance considerations in digital document management

Day 2: Electronic Document Management

- Document capture and digitization techniques
- Version control and collaborative editing practices
- Workflow automation for document processes
- Integration with existing IT infrastructure

Day 3: Digital Information Organization

- Metadata standards and best practices
- Taxonomy and ontology development
- Implementing effective search and retrieval systems
- Data classification and categorization strategies

Day 4: Long-term Digital Preservation

- Digital preservation strategies and supporting tools
- File format considerations for archiving
- Storage solutions for long-term preservation
- Disaster recovery and business continuity planning

Day 5: Optimizing Electronic Archiving Systems

- System performance tuning and scalability
- Security and access control measures
- Analytics and reporting for archival systems
- Emerging trends in smart archiving and information management

Training Methodology

This program combines theoretical knowledge with practical exercises to ensure actionable learning:

- Hands-on exercises in digital archiving, metadata creation, and taxonomy design
- Case studies on successful information management implementations
- Workflow optimization and process improvement simulations
- Group discussions on security, compliance, and emerging technologies

Beyond the Course

Participants will leave the program able to:

- Implement an efficient electronic document management system.
- Develop a comprehensive digital preservation strategy.
- Create an effective taxonomy and metadata framework for improved information retrieval.
- Optimize existing archiving processes for efficiency, compliance, and long-term usability.
- Confidently manage digital information to support organizational goals and compliance requirements.
