Technical Project Management: Mastering IT Initiatives

Ref: 322505_201581 **Date:** 19 – 23 July 2027 **Location:** Accra (Ghana) **Fees:** 4200 GBP

Why This Course

Technical projects in IT environments often involve complex requirements, changing priorities, technical dependencies, cross-functional teams, security considerations, and tight delivery timelines. Managing these projects effectively requires more than general project management knowledge; it requires the ability to understand technical contexts, communicate with technical and non-technical stakeholders, manage risks, control scope, and support delivery through both traditional and Agile approaches.

This intensive 1-week Technical Project Management Training program equips participants with the practical skills needed to lead IT and technology-focused projects from initiation to closure. The course covers project lifecycles, methodologies, planning, scope management, estimation, risk management, quality assurance, change control, team leadership, stakeholder engagement, Agile and Scrum, project monitoring, closure, and lessons learned. Through real-world case studies and hands-on exercises, participants will gain confidence in managing complex technical projects with structure, clarity, and control.

What You'll Learn and Practice

By joining this program, you will:

- Explore IT project lifecycles and delivery methodologies.
- Define the role of the technical project manager.
- Identify success factors in technology-driven projects.
- Apply project selection and initiation techniques.

Day 2: Planning and Scope Management

- Create comprehensive project plans for technical initiatives.
- Develop Work Breakdown Structures to organize project work.
- Define project scope, deliverables, assumptions, and constraints.
- Apply time and cost estimation techniques.
- Build planning baselines that support project control.

Day 3: Risk Management and Quality Assurance

- Identify and assess risks in technical project environments.
- Develop risk response and mitigation strategies.
- Apply quality management practices in IT projects.
- Manage changes through structured change control.
- Use configuration management to maintain control over technical deliverables.

Day 4: Team Leadership and Stakeholder Management

- Lead and motivate technical project teams.
- Apply communication strategies for technical and non-technical stakeholders.
- Conduct stakeholder analysis and engagement planning.
- Manage expectations across teams, sponsors, vendors, and users.
- Resolve conflicts in technical project environments.

Day 5: Agile Methodologies and Project Closure

- Understand Agile principles and Scrum fundamentals.
- Apply Agile practices in technical project delivery.
- Monitor and control project progress using suitable tools and methods.
- Conduct project closure activities and final handover.
- Capture lessons learned and identify improvement opportunities.

Individual Impact

- Build confidence in leading IT and technical projects.
- Strengthen planning, scope management, estimation, and control skills.
- Improve risk management, quality assurance, and change control capabilities.
- Enhance communication and leadership skills for technical teams.
- Gain practical experience with project management tools and methodologies.

Work Impact

- Improve delivery of complex IT and technology projects.
- Strengthen alignment between technical project goals and organizational objectives.
- Reduce delivery risks through better planning, quality control, and risk mitigation.
- Improve communication between technical teams, business stakeholders, and leadership.
- Support continuous improvement through structured closure and lessons learned.

Training Methodology

This program combines technical project management concepts with practical application through:

- Real-world IT project case studies.
- Project initiation and planning exercises.
- WBS, scope, estimation, and scheduling activities.
- Risk management, quality assurance, and change control scenarios.
- Stakeholder communication and team leadership simulations.
- Agile, Scrum, monitoring, closure, and lessons learned workshops.

Beyond the Course

Upon completion, participants will be able to:

- Lead complex IT projects from initiation to closure.
- Create practical project plans, WBS structures, schedules, and estimates.
- Manage technical risks, quality, changes, and configuration controls.
- Communicate effectively with technical teams and business stakeholders.
- Apply Agile and traditional project management approaches appropriately.
- Use lessons learned to improve future technical project delivery.
